

GROUP SEVEN LTD® PRESENTS

Construction Monitor System (CMS) is most powerful height-end construction inspecting tool. It's faster, smarter, easier and has articulate interface.

CMS works for your business. The future of productivity is ready when you get CMS. It's an intuitive & easier way to successfully complete your construction management. The customer can use online service and monitor current status of construction in real time or inspector will send complete report by e-mail or mail.

Get CMS now and organize your construction inspection

DESCRIPTION

Construction Monitor System is a tool for construction site inspector, which based on Maemo 5 software platform.

How it works?

- **System creates the task plan**
- **Manager defines which sites should be inspected by inspector (writes to the database)**
- **Inspector loads the day plan from server to Maemo - device database**
- **Inspector goes on construction site and checks up the statuses of each construction process within checklist**
- **When all inspection is done the system signs GPS location and datetime**
- **After that system will synchronize the data with server as soon as any connection to the server is available**
- **The measurements will be further available for customers online.**

TECHNIQUES

- **MySQL – for storing and retrieving inspection data**
- **Esbox – application development**
- **GPS – locates inspector position**
